# INTRODUCTION

SuperPancake is the newest member of the Cake family.

Super Pancake is an hyper-deflationary token with safe autofarming to earn passive reflections. We are the first token that you can earn **\$CAKE** with automatic burn, amazing weekly prize, special features, etc...

Our reward tokenomics are unlike any others.

we reward the holders with a coin that has HUGE potential to growth and the future of altcoin industry. Super Pancake is your best partner, he start to make money for you immediately when you hold **\$SUPERCake**. Every 60 minutes, we reward ou holders with **\$CAKE** tokens.

Hold **\$SuperCake** and earn **\$CAKE** automatically, not a single action is required. Hold **\$SuperCake** and get rewards in **\$CAKE** automatically on every transaction directly on your wallet. See your assets in **\$CAKE** growing indefinitely.

# WHY US?

You might ask yourself, what makes **SUPERPANCAKE** so special? It is a hybrid of Superhero and the famous PancakeSwap.

SuperCake is a community-driven, interactive De-Fi token. Become part of SuperPancake World amazing community and see your assets moon!

How do you pick the right cryptocurrency when there are so many out there to choose from? Pick one that gives you an unlimited opportunities through our complete system!

# WHY REWARDS IN CAKE ?

**CAKE** is one of the best popular digital coin.

**CAKE** is a great token to invest and you will receive them just for holding **\$SUPERCake**.

The **Cake** token already has a massive following, a large marketcap, and a substantial liquidity pool.

Not one crypto investor, new or hold, hasn't heard or used **Cake** at least once.

The Cake platform is one of the key players in the shitcoin industry, and is definitely here to stay.

The Cake token will gain even more popularity, and we see infinite potential in the Cake token.

# ARE WE SAFU ?

By releasing a well-explained white paper, promoting a high level of communication, provide all wallet addresses, supply allocation and the team's allocation, Super Pancake can start to build a strong foundation of trust and transparency in the crypto market. In the current crypto market, trust in the project, security of the dapps and contract is the most important factor. That means full transparency not only in the community support and development but also in any security effort. The Super Pancake token contract is audited by FreshCoins. Liquidity will be locked on PancakeSwap and the team has kept a very small ratio of tokens for marketing to reduce any kind of risk. No rug pulls here, Super Cake is in for the long haul.

## LOCKED LIQUIDITY

Initial liquidity will be locked for 2 years to provide holders with peace of mind that the token can always be exchanged. We will also eventually move to infinity lock for the LP tokens

## MARKETING WALLET

The marketing wallet (5,00% of supply) will be locked for several months with partial disblock each week. This wallet will be used for promotional purposes such as airdrops, giveaways & contest

## CONTRACT AUDITS

In an effort to increase transparency and ensure security, the team has planned to undertake 1 audit with FreshCoins in first 24 hours after launch. We'll be able to ensure no vulnerabilities can be found. An Certik audit is also planned in future. Become a Holder of one of the most transparent projects on the BSC platform

# VALUES

## TRANSPARENCY

SuperPancake is decentralized and supported by its community of enthusiasts. We encourage open communication and believe trust, transparency, and community are the 3 Pillars to building longevity. Video chat was done before the launch, the developer and the marketing manager were fully doxxed.

## COMMUNITY

SuperPancake is growing fast. we believe that only together we are strong. Community is everything and SuperCake strives to include everyone from around the globe. A token is only as strong as its members, that's why we :

share our thoughts with the community before taking decisions we listen to the community's suggestions and try to realize them

## TRUST

In cryptocurrency market trust is paramount. That means full transparency not only in the community and development but also in security efforts.

# SPECIAL FEATURES

## **AUTO HOLDER**

2% of each purchase and 5% of each sale, in total 7% of the transaction will go back to our amazing \$CAKE holders

## **AUTO BURN**

1% of buy transaction and 1% of sell transaction will be automatically burned

## **AUTO LIQUIDITY**

1% of each sales transaction will go to PancakeSwap liquidity reserve

## **ANTI WHALE MECHANISMS**

Our contract has anti whale and anti-dump systems and even sniper bot protection.

To avoid a single wallet holding a large chunk of the supply and sudden big dumps, we've an Anti-Whale and Anti-Dump mechanism implemented which will limit the holders holding more than x % of supply and from executing a very large buy/sell order.

# OUR TOKENOMICS

**TOTAL BUY SLIPPAGE =5% - Every Buy transaction is taxed with a 5% fees**

2% is swapped to \$Cake and distributed to all holders

1% is auto-burned to reduce total supply and make SuperCake token even more rare

2% is swapped to BNB and sent to marketing wallet to guarantee marketing and partnerships

**TOTAL SELL SLIPPAGE =10% - Every Sell transaction is taxed with a 10% fees**

5% is swapped to \$CAKE and distributed to all holders

1% is sent to Liquity Pool to liquidity

1% is auto-burned to reduce total supply

3% is swapped to BNB and sent to marketing wallet

# DISTRIBUTION

**Total Supply = 1,000,000,000,000**

Liquidity = 500.000.000.000

Initial Burn = 450.000.000.000

Marketing = 50.000.000.000

Marketing = 5 %

Burn = 45 %

Liquidity = 50 %

# MARKETING

Marketing is the most important factor in the growth and life of a coin.

Having a marketing tax is the difference between a short and long term project.

Running out of marketing funds is synonymous with the end of a coin, and having only a « marketing wallet » is inefficient, in the sense that it requires the developer to do a « one time » sell and affect the price chart of the token.

Having a marketing fee, however, guarantees that as long trading volume is reasonably high, funds are being put at the service of marketing and growth of the project

# POINTS CITED AS DANGEROUS BY MOONARCH'S SMART CONTRACT CHECKER

The tool used by MOONARCH is outdated and does not recognize these features, and as it does not assimilate these functions, it identifies them as dangerous, but none in our contract is malicious, they all have a purpose so they indicate for us to check, so we are making clear and transparent all the functions cited as malicious by this tool, thus following the values of the SUPERPANCAKE project with our investors.

## ATTENTION

Our liquidity is blocked for 2 years through Cookie sale and you can check this link:

<https://cookiesale.io/cookieunlock/record/73?chain=BSC>

And in addition, currently on 13/09/2022 our top 100 Holders that can be verified directly on the BSC official website:<https://bscscan.com/token/tokenholderchart/0x2-f3b3400427c359f9e4559c4f41c6e6e2d254aca> , THEY OWN 73% OF THE TOKENS. WE ARE 100% SAFU AND SAFE.

### // Unusual mapping name cooldownTimer, check usage

“Cooldown” function, which determines a time separation between one purchase and another, which limits the number of purchases for a certain period, used to avoid bots at launch.

### // Check usage of hidden field marketingFeeReceiver

Function that determines the value of the Marketing wallet fee

### // // Check usage of hidden field developmentReceiver

Function that determines the Dev wallet fee amount (this function is permanently disabled)

// onlyToken might contain a hidden owner check, check it

It is a modifier function in the distribution contract, where it only allows the main token to make changes to it, function to improve the security of the contract.

// onlyToken restricts calls to an address, check it

It is a modifier function in the distribution contract, where it only allows the main token to make changes to it, function to improve the security of the contract. Restrict calls to a single address for the above reasons

// Unusual mapping name shares, check usage

Unusual mapping name shareholderClaims, check usage

Unusual mapping name shareholderIndexes, check usage

Contract functions to register reflection distributions in \$CAKE

// Authorization mechanism could bypass ownership renounce

Function so that the contract allows multiple Owners, that is, if we have a security problem in the main wallet, we have another contingency wallet (backup) for any emergency, on a computer that is suitable for this, thus improving security of the contract.

Points cited as attention by MoonArch's Contract Checker

cooldownEnabled has onlyOwner modifier

Function that allows the contract owner to activate or deactivate the cooldown, a function that limits the number of purchases for a certain period.

setMaxWallet has onlyOwner modifier

Function for the contract owner to activate or deactivate the setMaxWallet, a function that limits the amount that a single wallet can have of \$SUPERCake.

setFees can probably change the fees

Function that changes the rates of buy and sell transactions

**setTxLimit can probably change transaction limits**

Function that limits the amount of \$SUPERCake that each wallet can handle in transactions

**Function constructor has modifier Auth**

The “constructor” function is defining the wallet that created the contract as Authorized, and it is used only once and in the contract compilation to define the wallet owner, after executed it has no more function or utility in the smart contract

**Check usage of field pair**

Function to automatically identify pairs registered on Pancake-Swap so that they do not have to be manually entered into the contract after creating the Pair on PancakeSwap.

**Check usage of field \_token**

Function that registers which token is the OnlyToken (token paid in the \$SUPERCake buying and selling reflexes), in our case, we pay in \$CAKE.

# ROADMAP

## 1

### PHASE
